

CORE WINDERS

TrenCore Belting

Shingle Belting's truly endless TrenCore tube-winder belts are designed with many years of application experience and manufactured on state-of-the-art equipment. The premium rubber and reinforcement materials result in truly endless belts that offer maximum performance.

TrenCore Advantages

Specially compounded TrenCore rubber covers are designed for maximum abrasion resistance and uniform pull throughout the belt's life

Manufactured truly endless, TrenCore belts have no splice that can fail

High-tensile strength members are pre-tensioned, resulting in less stretch than the competition's belts

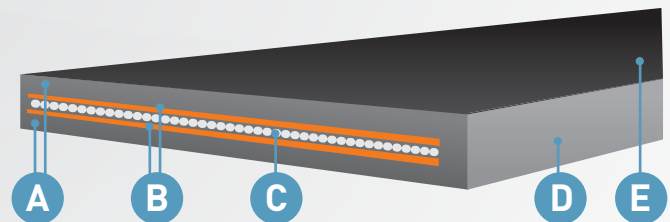

The top and bottom covers of TrenCore belting can be used to double the belt's life

Both edges are sealed which eliminates belt stringing and decreases edge abrasion

Designed to work with a wide variety of paper types
